

# Bradley Eye Associates

## Consent form for Retinal Photography

As you know, part of your eye exam includes an examination of your retina. More often than not, dilation is required to see adequately all the necessary anatomical structures, as well as to determine the presence of Glaucoma, Macular Degeneration, Diabetic Retinopathy, and many other eye disorders.

Bradley Eye Associates now offers our patients advanced technology in retinal photography. Retinal photography is a high resolution screening photograph of your retina which will help us document, review, and compare your retina over time. The photograph becomes an instant part of your medical record. These digital images are stored in the computer and will be compared with images from past and future exams. This allows the doctor to observe even the smallest change from the previous exam. And the best part of all... **No Drops Required!**

There is an additional fee of **\$29** if you wish to have this service performed. Please indicate below if you would like to have this **quick and painless** procedure today!

- Yes, I would like to have Retinal Photography done today.
- No, I do not wish to have Retinal Photography done today.
